TNITNEXPERIENCE

Omni-channel Platform

Integrate data from all different channels to allow personalized experiences and a single customer vision.

Open Framework

The solution offers an open API framework ready to integrate with even more systems that provide additional data layers, or to export and publish BI and BA to tools and interfaces that your business already has in place.

Business Analyser

Powerful and dynamic analytics tool built around the synergies of software modules that cover all customer touchpoints and create reliable and data-driven KPI's

Mobile App

Modular channel to allow customers to access services and complete information anywhere, at anytime.

Queue Management

Operational control over Branch network that allow transforming customer interactions into more efficient, productive and pleasant experiences.

Digital Signage

Convert wait time into quality time and increase communication opportunities through tailored interactions with customers.

Feedback & Surveys

Customizable surveys that allow understand customers' perception of the service and provide feedback for improvement opportunities

Footfall

Use AI-cognitive services and hotspot analysis to record and analyse customer patterns and behaviours on the Branch

Kiosk Management

Powerful and flexible management tool to monitor kiosk or service machine network.

Allows for equipment and module status monitoring remote updates, real-time performance indicators and full access to transaction details.
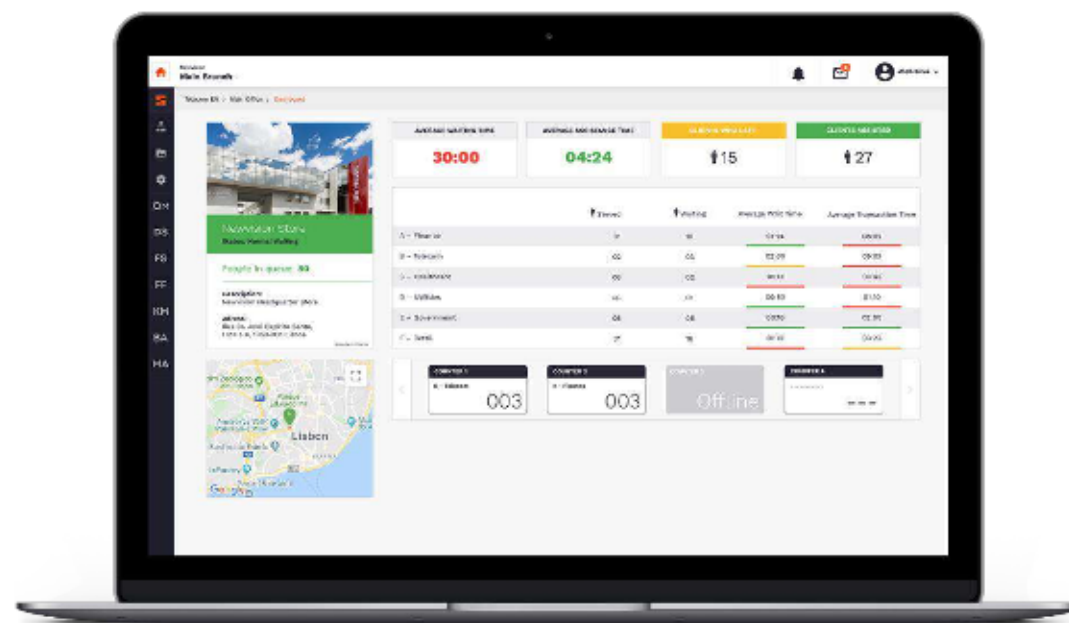

Queue Management

Standard

The **Queue Management Standard** application grants your services with an organized and consistent structure across your entire customer service network, by implementing operational and analytical tools that transform customer interactions into more efficient, productive and pleasant experiences.

Enables the most efficient workload planning and distribution, reduce transaction times and increasing overall productivity, allowing staff to deliver a more focused and personalized service.

Main Features

— Centralized Web Application

— Complete Operational Tools

— Queuing Kiosk Management & Monitoring

— Flexible Queuing Algorithm Management

— Real-time Dashboards & KPIs

— Management Reports

— Internal & External Alerts and Notifications

— Multi-Language Support

— Customer Identification support

— Multi-channel implementation

Omnichannel

INLINEXPERIENCE comes with many channels for customers to get in touch with your business, and the services provided at its branches or stores.

From the empowering freedom of a Mobile App to the ever-reliable self-service Queueing Kiosk and even a Greeter's personalized touch, you can choose the most appropriate combination to better serve your customer base.

Know your customer

From mobile app personal accounts, to magnetic or chip card readers, barcodes and biometrics at the Queueing Kiosk, **INLINEXPERIENCE** features customer identification methods in every customer entry channel.

By capturing every interaction from the very start of the customer journey, you'll lay down the foundation for understanding your customer's habits, needs and desires.

QM
Queue Management

Plus

The **Queue Management Plus** application expands on the standard queue management functionality, providing additional tools to setup a simple to use, but powerful appointment system, allowing customers to easily book appointments for specific services at their own convenience.

For the business, it represents the ability to better plan and assign resources according to actual customer service requests, and apply data and insights to further improve customer service delivery.

VISION

Queuing Kiosks

The **VISION** is a quality technological approach to help organize very simple queuing scenarios. Besides delivering a fresh and modern look to any service environment, it also enables the full functionality of an efficient Queue Management system, all that through an extremely cost-effective device.

Main Features

— The most economical, small footprint kiosk solution

— Countertop, Freestanding Pedestal or Wall mount options

— 7" High Quality Touchscreen

— Very intuitive interface, with the ability to customize layout graphics

— Supports static image showcase functionality

— Standard 57mm Thermal Printer, with no proprietary requirements

— Allows the printing of graphics, logos and text

— Easy access for maintenance purposes e paper roll replacement

— Wi-Fi / Ethernet communication and interfacing capabilities for external modules (call consoles, displays, etc.)

Dimensions

| Length	Width	Height	Weight
155mm	155mm	235mm	1.65 kg

NEWVISION®
technology centre

The **Digital Signage Standard** application allows turning every waiting minute into the perfect opportunity to reach out to customers and start building solid business relationships.

It allows the personalization of screen layouts with the many customization features available, branding them with the visual identity of each business, implementing a uniform framework from which to deliver consistent communication and engaging content.

Main Features

— Centralized Web Management

— Seamlessly Integrated with QM modules

— Multiple Layout Templates

— Screen customization

— Gallery & Playlist management

— Signage Device Management

— Ticket Voice Call

— All Industry-Standard Media Formats Supported

— TV Tuner Ready

— Multi-language support

— 3rd Party Integration Ready
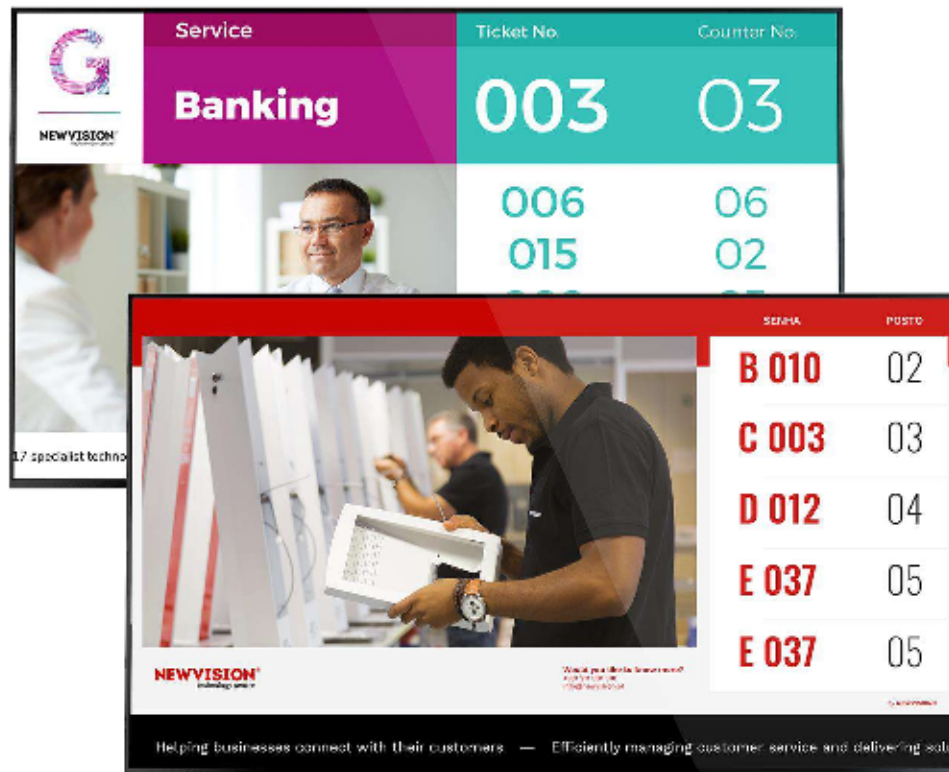

Digital Signage

Plus

The **Digital Signage Plus** application expands on the standard functionality, providing additional tools to manage large coordinated campaigns and promotional partnerships, increasing the impact of content distribution through the usage of all **INLINEXPERIENCE** customer touchpoints.

It enables businesses to create, organize and distribute marketing campaigns, and take advantage of the powerful AI and advanced algorithms to target your customers with tailored messages and campaigns based on the customer profile.

Main Features

— All **DS Standard** Features

— Centralized Web Application

— Complete content scheduling tools

— Network-wide campaign management

— All IX touchpoints as broadcast nodes

— A.I. based content targeting

— Seamlessly Integrated with all IX modules

— Campaign performance reporting

— 3rd Party Integration Ready

NEWVISION®
technology centre

The **Feedback Surveys Standard** application allows understanding how customers rate the quality of service being provided to them, and use the knowledge obtained to deliver continuous improvement to their experience.

Using this application, customers can give immediate simple feedback on how they perceive their customer experience, giving the business real-time indicators and consolidated detail on results and performance.

Main Features

— Centralized Web Application

— Complete survey customization tools

— Implements simple ratings (C-SAT, D-SAT, NPS)

— Real-time Dashboards & KPIs

— Management Reports

— Internal & External Alerts and Notifications

— Multi-Language Support

— Multi-channel implementation

— 3rd Party Integration Ready

FS

Feedback Surveys

Plus

The **Feedback Surveys Plus** application adds the necessary tools to create fully customizable conditional surveys, with multiple question/answer format and link results with actual customers, making use of your entire touchpoint network to deliver surveys and promotional offers.

This will allow the business to get detailed quality feedback on customers' needs, desires and improvement suggestions, reward them for providing their opinions and open new possibilities for continuous improvement for the customer experience.
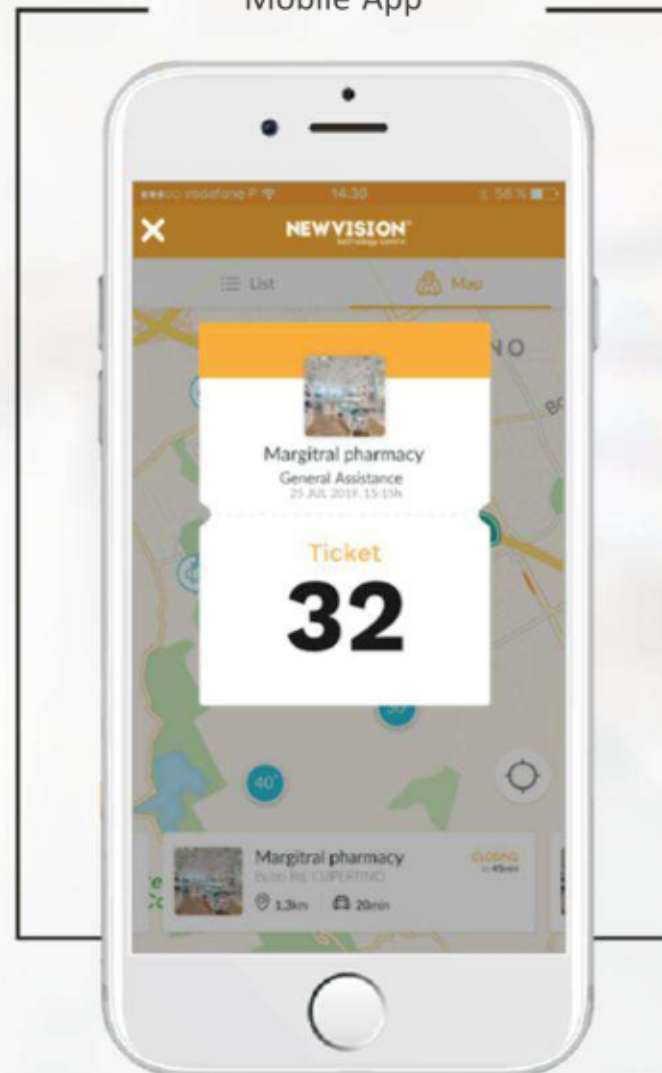

Main Features

— All **FS Standard** Features

— Centralized Web Application

— Implements simple to complex surveys

— Multiple question-answer formats

— Conditional questions

— Link survey results to individual customers

— Promotional coupon reward system

— Real-time Dashboards & KPIs

— Management Reports

— Internal & External Alerts and Notifications

— Multi-Language Support

— Multi-channel implementation

— 3rd Party Integration Ready

BA

### Business Analytics

The **Business Analytics** module brings to life all of the collected and generated data, suggesting operational courses of action and pointing the way for strategic performance improvement. It allows reaching the maximum potential of each **INLINEXPERENCE** application, consolidating the data produced by each and giving the business the tools to create reports with customizable detail levels to produce a solid perspective on service performance and customer behavior patterns.

The BA also includes incredibly powerful tools like a workflow simulator that helps managers understand how certain changes in configuration will affect service performance, and even apply predictive models, using historical data to help predict what will be the customer service demands, in a given future date and time.

Main Features

— Centralized Web Management

— Customizable Dashboards

— Dedicated Dashboards for every IX module

— Ad-hoc and Scheduled Report generation and distribution

— Pivot Table for creating your own datasets

— Export the results in multiple formats

— Performance analysis and management

— Workflow Simulator

— Predictive Models

— Seamlessly Integrated with all IX modules

— 3rd Party Integration Ready

NEWVISION®
technology centre

Business Analytics

Main Benefits

BA

Organized Reports

Say goodbye to scattered information and reports put together in the last minute - your management will be able to use all the time they save to focus on other aspects of business productivity!

Pivot Table

To get even deeper insight on your organization, the Business Analyzer includes a powerful Pivot Table feature, enabling the cross-referencing of all system metrics produced by Inline solutions, with complete filtering option so you can customize access to the exact data your business needs.

Simulate & Predict

This powerful software suite can even predict customer flows and simulate the impact of adjusting system variables - such as opening or closing more service counters, rearrangements to resource allocation or making slight changes to the priority algorithm, so managers can always make sure that service operations are fully optimized.

# Technology as the way for <u>meaningful</u> transformation

Features such as the ability to make simulations on customer flow behavior and suggesting the course of action to improve set KPIs and SLAs, or the application of predictive models on customer affluence, service request types and how they both relate over time, enable branch managers to take better operational decisions and deploy preventive and corrective measures whenever they are needed.

By applying some layers of artificial intelligence over the different types the collected data, the applicational core can also take care of many operational adjustments at the branch level completely on its own, routing customers to the most efficient resource given a specific type of service, matching staff skillsets to customer needs or adapting the media content of digital touchpoints according to in-store customer profiles or demographics.

NEWVISION®
technology centre

The **CASHVISION PLUS** is a cash management machine, especially conceived for high-volume, cash-intensive retail scenarios. Its security features protect the assets, reducing the risk of theft and fraud.

Unlike the standard **CASHVISION**, this is an operator facing machine, used to secure cash payment assets and cash recycling operations.

Main Features

— Receives and secures cash payments **by the operator**

— 7" Touchscreen Display (movable)

— Accepts coin and bank note payments

— Safe-protected cash recycling

— High-speed counting and validation

— Electrostatic painted, highly resistant to corrosion and with low conductivity

— Wide-range and flexible integration capabilities

— Software Development Kit (SDK)

— Ethernet, RS232 & GSM communication

— Maintenance & Monitoring Software

Dimensions

Length	Width	Height
505mm	641mm	735mm

CASH VISION

CASH MANAGEMENT & RECYCLING

Benefits

— Highly reduced risk of theft and fraud

— Improved efficiencies handling cash at the end of day

— Eliminates human error when counting money and giving change

— Automatic validation of denominations and rejection of counterfeit money

— Removes the need for tellers to handle money directly (**STANDARD**)

— Balances cash-availability between all tellers (**PLUS**)

— Safely stores money

Operating Procedure

The standard **CASHVISION** uses a very simple operating principle: each time a payment is processed, the customer uses the CASHVISION to insert cash until the total amount for the purchase is reached.

With the **CASHVISION PLUS**, whenever a payment is to be processed, it is the operator/teller that uses the machine to insert the customer's cash until it reaches the total amount of the purchase.

As the machine is connected to the POS system, it receives and counts the cash, processes the payment and, thanks to its cash recycling capabilities, always returns the correct amount of change.

Cash Hanlding Options
